

teknion community table

a model of simple design, that is about people

OVERVIEW

Designed for Teknion by Michael Vanderbyl, the community table represents an approach to design that is essentially about people, in tune with human needs and modern workstyles based on interaction. A model of simple, straightforward design, substantial proportions give the table sufficient presence to act as a focus for the space, an architectural anchor that invites people to gather and draws them into deeper social and work

interactions. Access to power/data is transparent, provided via a central trough. The dimensions of the table can be customized to meet clients' exact requirements. Minimal and yet warm, this is a well-crafted wood table ideal for the new human-centered workplace, one that references the domestic environment; one that is informal, collegial and collaborative.

FRAMES

- Bar Height
 - Pricing by linear foot
 - Finishes to include V4s, Flintwoods and specialty finishes
- Electrical Outlets and number of sections determined by linear feet in standard configurations

teknion community table pricing
