dewey connection cart for collaborative spaces - flexible, reconfigurable, & support technology

FEATURES

- Mobile cart transforms spaces into connection points and collaborative hubs. Available in 63" or 75" height with locking casters (standard).
- Three different configurable options allow you to explore different learning and presentation methods. Choose the configuration that meets your needs tackable, writeable, or technology supporting.
- Flexible and reconfigurable, Connection Cart is designed to bring functionality to other work surfaces or nest with other izzy+ tables, like the Dewey 6-Top.
- Tackable option makes a colorful and customized design statement. Select from our izzy+flavors collection of 49 vertical surface fabrics.
- Writeable surface options include markerboard laminate or porcelain markerboard
- Technology option –Install your own technology on side one and select your laminate background from our izzy+flavors collection of 30 laminates. Open or closed lower storage is included and required in the technology option. Two power receptacles are located under the shelf and are included with the technology supporting unit. Manage your wires with a streamlined vertical wire management system – available as an accessory.

- Half-length models include a two-sided streamlined shelf design to reduce nesting footprint and provides storage for your tools. Or maximize your available space with the full-length model (side-mounted container accessory recommended).
- The side-mounted container accessory coordinates with frame finish selection and holds markers, eraser, push pins, and more.
- Dewey Connection Cart meets or exceeds applicable ANSI/BIFMA durability and safety standards. The technology supporting unit has been tested to accommodate standard technology requirements including a flush mounted 42" flat screen and web camera (45 lbs total weight). For applications that require heavier technology, please contact your customer service representative to discuss your needs and additional options.
